

## **American Microsystems, Ltd. Releases EASY ASSETS Data Management Software**

**EULESS, TX – May 2002 – American Microsystems, Ltd., the leader in low-cost bar code and data collection products,** announces the release of EASY ASSETS bar code based asset management software. EASY ASSETS software provides accurate and detailed information regarding the exact location, condition, and current value of fixed assets. EASY ASSETS gives users the power to quickly and efficiently track and control all their fixed assets.

EASY ASSETS software has all the features users have grown accustomed to in the Windows™ environment. User-friendly screens and easy menu navigation allow users to quickly perform any task. EASY ASSETS is “ready-to-use” right out of the box. No additional programming is required.

EASY ASSETS includes the ability to import and export data in a standard text format. This feature allows users to share EASY ASSETS data with existing business applications. EASY ASSETS is comprehensive and comes complete with a variety of standard reports and forms for tracking fixed assets.

EASY ASSETS software supports bar code data collection for increased productivity and accuracy when tracking fixed assets. When it’s time to take an inventory, users can scan bar coded asset tags and location labels, and import the data into EASY ASSETS. Once uploaded, EASY ASSETS can track asset movement, schedule maintenance, monitor maintenance costs and even calculate depreciation. EASY ASSETS is designed to work specifically with the M5000, M5510 and M5000 portable data terminals manufactured by American Microsystems, Ltd.

Reliable, easy-to-use, and affordable – EASY ASSETS can help save time and money in any business, eliminating costly paper based tracking systems and reducing incidences of asset loss, theft and misallocation. With a suggested retail price of \$495, any business can now afford to automate their asset tracking process with EASY ASSETS software.
